

A PHYSICAL ACTIVITY PROGRAM FOR SCHOOL-AGED CHILDREN WITH ATTENTION DEFICIT HYPERACTIVITY DISORDER

Attention deficit hyperactivity disorder (ADHD) is one of the most common neurodevelopmental disorders among children. Researchers from RMIT University are recruiting 8-12 year old children who have been diagnosed with ADHD by a health professional. Children are invited to participate in an eight-week group-based physical activity intervention program run by community cricket clubs with RMIT University. If you have a child who would like to participate in this research study, please click on this link for more information.
