

How long did it take for your child to receive an ADHD or ASD diagnosis?

What different treatments or supports have you have tried?

We are undertaking research to improve diagnosis of ASD and ADHD. We are looking for families from across Australia to take part if you:

- Have a child aged 18 or under
- Your child has received a diagnosis of Autism Spectrum Disorder (ASD) or Attention Deficit Hyperactivity Disorder (ADHD) within the last 6 years

The survey takes 60-75 minutes to complete. You can take a break during the questionnaire at any time.
